John, David,

During our weekly engineering project meeting, it was suggested I bring one of my projects to your attention.

Attached is the Barr Lane concrete crushing project with Arterial A overlaid, and the engineering report.

The engineering report described the select fill area as an unconsolidated resource extraction area (quarry) that will be backfilled with crushed concrete.

My concern is vertical particle migration causing premature failure of Arterial A.

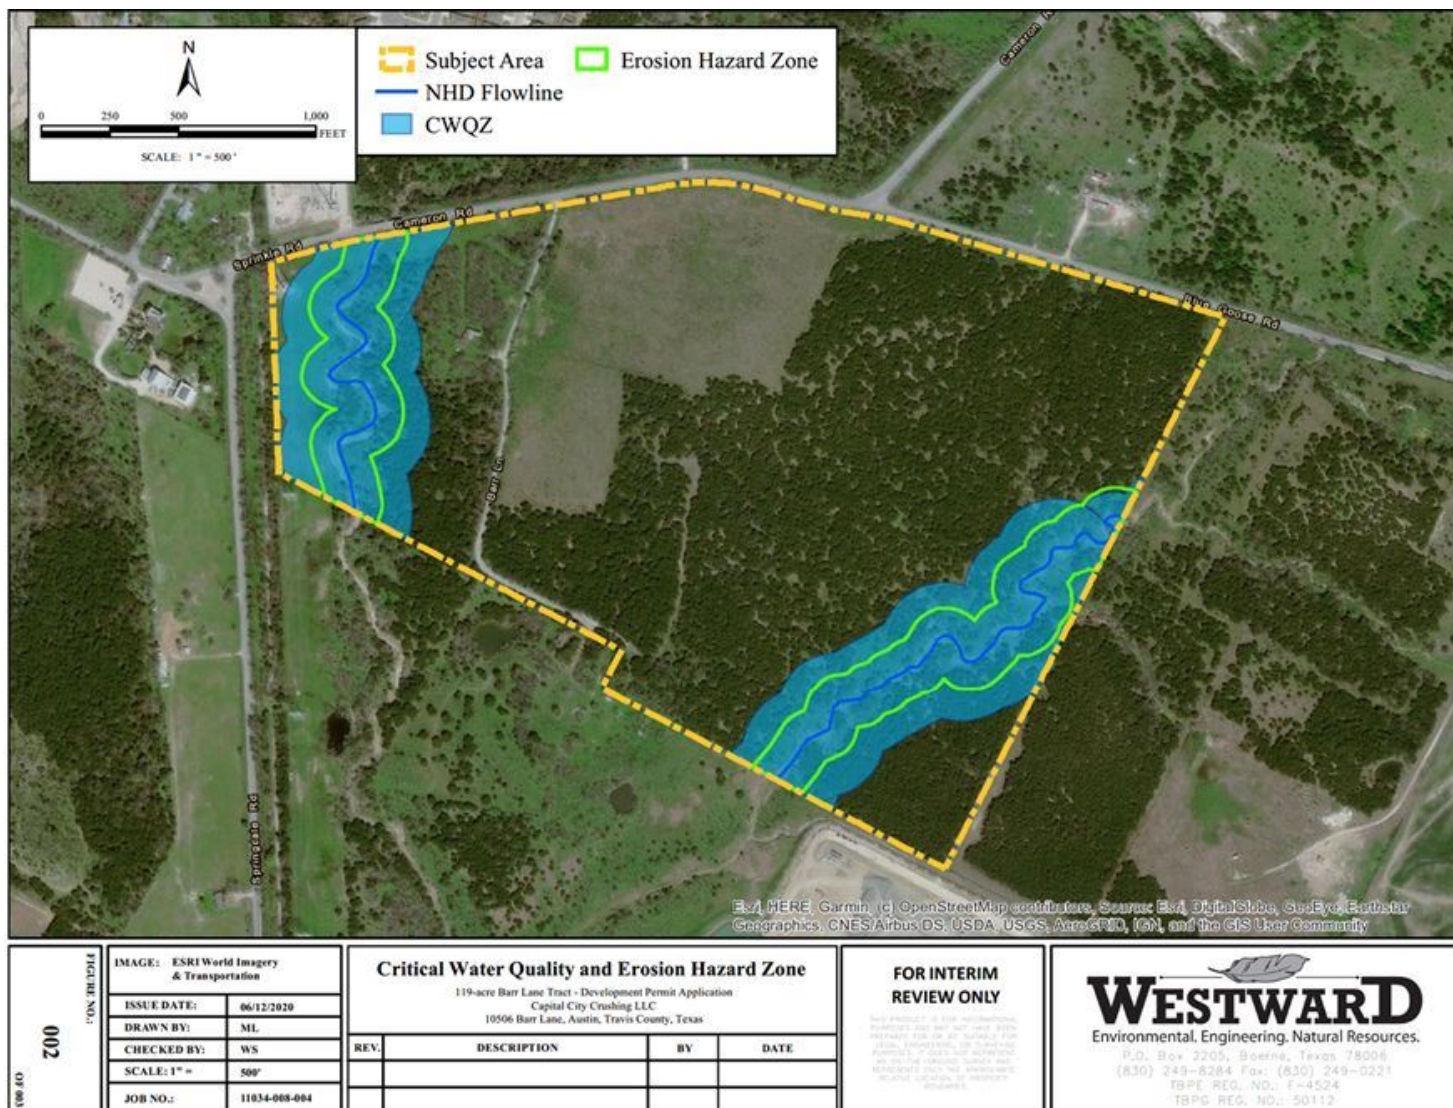

This sheet was provided to the Engineering firm: Westward Environmental <https://www.westwardenv.com/>

Andre'

Looking at their website: They do not indicate they have experience in transportation design. I am not confident they have staff that can address the extra wear and tear the hauling trucks will have on these roads.
